About SOC4SME

SOC4SME aims to reinforce the cybersecurity landscape for Greek and EU SMEs through the establishment of a sectoral Security Operations Center (SOC).

Operating independently under the aegis of the Ministry of Digital Governance (MDG) and the Greek National Cyber Security Authority (NCSA), our SOC4SME initiative brings together top experts to deliver high-performance, easy-to-deploy tools for real-time monitoring, threat detection, prediction, and response.

Leveraging cutting-edge AI and ML technologies, SOC4SME enhances data analysis capabilities, enabling proactive attack categorization, prioritization, and recommendations.

Our state-of-the-art endpoint detectors, including network firewalls and anti-malware systems, ensure continuous monitoring and protection of SME systems and networks.

Secure Your Digital Assets

Our Services

Real-time Monitoring

Continuous surveillance & detection of threats

By continuously analyzing network activity and system performance, this service will identify suspicious behaviors and potential threats the moment they occur, enabling immediate intervention to protect SMEs.

Timely Threat Detection

Proactive identification & analysis of potential threats

This service will provide SMEs with the tools necessary to detect anomalies, vulnerabilities, and malicious activities, enabling preemptive measures against attacks.

Prediction & Recommendations

Anticipation & mitigation of future cyber risks

By identifying patterns and trends, this service will provide actionable recommendations to help SMEs strengthen their defenses and reduce the likelihood of successful attacks.

Agile Incident Response

Rapid action in case of security incidents

When a security incident occurs, this service will ensure rapid and coordinated action including recovery steps to minimize damage and restore normal operations as quickly as possible, while also providing insights to prevent future incidents.
